

10. Develop a React code to collect data from rest API.

Program:

rest-app.js

```
import React, { useState, useEffect } from 'react';

function App() {

  const [users, setUsers] = useState([]);

  useEffect(() => {

    fetch('https://jsonplaceholder.typicode.com/users')

    .then(response => response.json())

    .then(data => setUsers(data))

    .catch(error => console.error("Error fetching data:", error));

  }, []);

  return (

    <div>

      <h2>User List from API</h2>

      <ul>

        {users.map(user => (

          <li key={user.id}>{user.name} - {user.email}</li>

        ))}

      </ul>

    </div>

  );

}

export default App;
```

Execution steps:

1. Check the installation in terminal window by running, `node -v` and `npm -v`.
2. Open frontend folder and Create react app by using, `npx create-react-app rest-app` in the terminal window.
3. Change the directory using `cd` command by typing, `cd rest-app`.
4. From the explorer window, goto `rest-app` folder/`src/app.js` and type the above code in it.
5. Now in the terminal window type, `npm start`.
6. Observe the output in the browser window with user name and email being displayed in a list form.
